SUMMARY

Software engineer building AI products with Python, Next.js, PostgreSQL, Docker, and real time communication. Experienced with LLM integrations, WebSockets, Stripe subscriptions, automated testing, CI, and production monitoring.

EDUCATION

Indian Institute of Technology Madras

Bachelor of Science in Data Science and Applications

Pursuing

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL

Application: Next.js, React, FastAPI, Node.js, REST APIs, WebSockets

Data & Infrastructure: PostgreSQL, Prisma, Drizzle ORM, Docker, Linux, AWS EC2, GitHub Actions, Vercel, Railway

AI, Integrations & Quality: OpenAI API, OpenRouter, LangGraph, TTS, Stripe, Vitest, Playwright, Sentry, Notion

EXPERIENCE & ACHIEVEMENTS

Odoo x Paradox Hackathon

June 2025

Full Stack Developer

IIT Madras

- Built **SynergySphere**, a team collaboration MVP, during a two day hackathon at the IIT Madras campus.
- Implemented task management, threaded chat, mentions, notifications, project dashboards, authentication, and persistent storage using Next.js, TypeScript, PostgreSQL, and Drizzle ORM.

PROJECTS

BuilderBridge | *Next.js, PostgreSQL, Stripe, Docker, OpenAI compatible API*

- Built a production oriented Next.js application backed by PostgreSQL, with role based access, document search, an LLM agent, and database writes protected by approval and permission checks.
- Integrated Stripe Checkout, billing portal sessions, and subscription lifecycle webhooks for organization plans.
- Added a Docker OCR service, Vitest and Playwright coverage, GitHub Actions CI, Sentry monitoring, and structured logs to improve reliability and maintainability.

IntelCraft | *Python, FastAPI, PostgreSQL, WebSockets, LangGraph, Docker*

- Developed a Python and FastAPI service that coordinates OpenAI, Gemini, and Tavily through LangGraph to research companies and generate personalized outreach.
- Streamed job progress through WebSockets, stored application data in PostgreSQL, and packaged the backend in Docker with a health check for deployment.

Ramso | *Python, OpenAI, TTS, Manim, FFmpeg*

- Created a Python pipeline that uses OpenAI models to generate scripts and animation code, Google TTS for voice output, Manim for rendering, and FFmpeg for final assembly.
- Orchestrated the full workflow from a user prompt to a downloadable two minute educational video without manual processing.

SynergySphere | *Next.js, PostgreSQL, Docker, Drizzle ORM*

- Built a team collaboration application with authentication, project and task management, threaded discussions, mentions, notifications, and persistent chat history.
- Used Docker Compose for the PostgreSQL development environment and Drizzle ORM for the application data model.
